

## Java

```
class Solution {  
    public boolean containsCycle(char[][] grid) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {character[][]} grid  
 * @return {boolean}  
 */  
var containsCycle = function(grid) {  
  
};
```

---

## TypeScript

```
function containsCycle(grid: string[][]): boolean {  
  
};
```

---

## C++

```
class Solution {  
public:  
    bool containsCycle(vector<vector<char>>& grid) {  
  
    }  
}
```

```
};
```

---

## C#

```
public class Solution {  
    public bool ContainsCycle(char[][] grid) {  
  
    }  
}
```

---

## Kotlin

```
class Solution {  
    fun containsCycle(grid: Array<CharArray>): Boolean {  
  
    }  
}
```

---

## Go

```
func containsCycle(grid [][]byte) bool {  
  
}
```

---
